City of Rockwall

CUSTOMER

The City of Rockwall is part of the Dallas/Fort Worth Metroplex and is located in Rockwall County, which is one of the top five fastest growing counties in the United States. Rockwall County is the second wealthiest county in the state of Texas in terms of median income. Bordered on the West by Lake Ray Hubbard, it has become a very desirable visitor destination and residential area for the continuously growing Dallas Metropolitan area.

CHALLENGES

Prior to installing the city’s DNA Fusion access control system, the City of Rockwall had no security in place. Credentialing, access control, and Intercom integration were all requirements for the City of Rockwall to function properly. The quickly growing government offices and buildings needed system providers that could design and install a system from the ground up as smoothly as possible and supply products that were flexible enough for the city’s rapid growth. The City of Rockwall also needed an installer that could easily install access control to the city’s water towers that were difficult to work on.

SOLUTION

When presented with a solution from Open Options and Securadyne, the City of Rockwall decided that both companies were the best fit for its needs. In 1999, Securadyne successfully installed the new system within three months to provide a fully integrated DNA Fusion access control system with Fusion ID and Stentofon’s AlphaCom intercom communications. Today the city is currently using 3 clients, approximately 75 readers, and 60 sub-controllers with over 500 cardholders throughout 9 sites. Because the City of Rockwall is located in one of the fastest growing counties in the United States, new construction will expand the access control system as needed.
