

Fusion X

DNA Fusion Web Interface

Overview

Fusion X is the next generation of the DNA Fusion web-based experience. It is built on our Flex API and features our enhanced user interface.

Fusion X provides a secure way to remotely manage your DNA Fusion access control system from any supported web browser. **Fusion X** allows current users to search, view, and edit personnel as well as view and control system hardware right from a web browser. Alarms and Events can also be viewed, acknowledged, and cleared within **Fusion X**.

Fusion X lets you access the system remotely to manage or react to specific situations such as granting access after hours or controlling doors remotely. **Fusion X** was designed for ease of use and makes it simple to accomplish a variety of common tasks in DNA Fusion without having to resort to a thick client.

This powerful web application is the perfect solution for the remote management of your access control system.

Features

Manage personnel:

- Add/remove access
- Set use limits
- View photos
- Activate/deactivate cards
- Trace history reporting
- Print badges
- Custom reporting

View and manage entire system hardware by site, controller, or door pages

Control hardware:

- Momentary unlock of doors
- Change reader mode
- View status of system hardware
- Arm/disarm areas or points
- Control & view status of time schedules
- Trace history reporting

Personnel Detail

The screenshot shows the 'Personnel Detail' page for Stephanie Ode. The interface includes a sidebar with navigation options like Dashboard, Candidates, Comments, Hardware, and Reports. The main content area is divided into three sections: 'Employee Information' with fields for First Name (Stephanie), Middle Name, Last Name (Ode), and Email; 'Employment Information' with fields for Start Date (01/14/2020 10:50 PM), Location, Department, Work Phone, Site, and Company; and 'Personnel Information' with fields for Title, Employee ID, and DL. There are also tabs for 'Credentials' and 'Badging'.

Door Control View

The screenshot displays the 'Door Control View' for FusionX. It features a 'Timeline view' graph showing activity over the past 6 hours in 15-minute intervals. The graph tracks 'Total' (blue), 'Granted' (green), 'Denied' (orange), and 'Alarmed' (red) access events. Below the graph is a control panel with 'Status' (Mode: Unknown, Held: Unknown, Forced: Unknown) and 'Control' (Door Forced: Unknown, Door Held: Unknown, and a 'PUSH TO OPEN' button). A 'Recent Access' log shows 'Jared Bowdy' accessing '11.02: AWS Cloud Door 1' at 12:00:00 PM.

Customizable Dashboard

The screenshot shows a 'Customizable Dashboard' for FusionX. It includes a 'Timeline view' graph for the past 6 hours in 30-minute intervals. Below the graph are several widgets: 'System Status' (Memory: 20.12 GB / 32 GB Access), 'Alarms' (listing various 'Master Panel Active' and 'W/O Door' events), 'Recent Access' (listing users like John Barrett and William Bell), and 'Direct Commands' (listing commands like 'Release on Door 1 (Open to Area 1)').
