- Grid line support
- Background images
- Alignment tools for placement of images and text
- Magstripe encoding and Barcode support
- Text and Image Editors
- Built in scripting functionality

* Contact Open Options for supported models and additional information.

Fusion ID™

Integrated Credential Management

Overview

Create, manage, and print all of your ID cards and access credentials from one central location with Fusion ID. Designed to work exclusively with the DNA Fusion security management system, Fusion ID is scalable from entry-level to enterprise applications. Fusion ID works with the Valcam 9000 professional series camera as well as supported TWAIN capture devices.

The included Badge Designer software gives you the power to create great looking ID cards with support for unlimited images, shapes, text, and data. Designing badge templates is simple using the intuitive editors for text and image placement and advanced users will love the built-in scripting capability.

Fusion ID is the best integrated solution available for ID badge production and because it works with DNA Fusion, your data is shared between both systems for easy input and personnel management.

Fusion ID™

Features

Operating Environments

- Runs on Microsoft Windows (See DNA Fusion supported operating systems).
- Based on Microsoft Win-32 API
- Support for long file names

Printing Environments

- Support for Windows compatible ID card, inkjet, and laser printers
